Presentation Plan

PowerPoint

This will be done first. Mac should do most of the presenting during this part since it was his main contribution ang he will not get much opportunity to present during live demo section. Must cover all requirements in guidelines and on checklist.

Live Demo

Diya*
Student user type first:
Create a new account and sign in
Walk through the ai assisted onboarding and cv upload
Explain features of each page:
Feed- purpose, how to use it, event calendar, notifications, ai assistant
Bounties- what bounties are and their appeal, how to filter bounties, post a bounty, what affects bounty rewards (logic points), leaderboard
Jobs-viewing different job listings, difference between for you and all, how to show interest/apply
Messages- basic
Profile- skim through, and show portions that are filled based on initial cv upload

Kieyara*
Profile- continues since she is responsible for profile layout, speak on behalf on sashen explaining all the options in the burger menu(edit profile, dashboard, light/dark mode toggle, logout, change password, delete account)

then move on to Alumni user type:
Create new account

Sashen*
Shows how alumni are approved on the admin panel

Kieyara*
Signs in as approved alumni user and does walkthrough of app similar to the one done for student user

Sashen*
Business user type:
Creates a business account and demonstrates the same approval process explaining what makes a prospective business user allegible(actualy business email), and explains why they must be validated(to avoid people impersonating business, scam job postings, etc.)
walkthrough of each page of the app from the business user pov, how to post job listings and view students/alumni showing interest/applying
receiving and responding to direct messages

*screen recordings will be shown at the end of the live demo in order to show capabilities that were not enabled for the sake of a swift live demo:

1. user receiving email verification and then being able to access the app- when playing this, whoever is presenting must justify **why** this has adds value to the app and also note why it was not enabled for the live demo
2. admin panel being implemented on an actual website, this can be done and kept aside for safe keeping.
